

Project Initialization and Planning Phase

Date	25 june 2026
Team ID	xxxxxxx
Project Name	Opti crop- Smart Agricultural Production Optimization Engine
Maximum Marks	5 Marks

Define Problem Statements (Customer Problem Statement Template):

I am a traditional farmer looking to maximize crop yield and profit. I am trying to determine the most suitable and profitable crop to plant in my field for the upcoming season, but changing weather patterns and unpredictable soil health make it incredibly difficult to guess correctly by intuition alone. This is because I lack data-driven tools to test and understand how my specific soil chemistry (N, P, K, pH) and local climate (temperature, rainfall) match up with different crop requirements, which makes me feel anxious about potential financial loss, stressed by the investment risk, and uncertain about the future harvest."

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A traditional or tech-forward farmer seeking to maximize seasonal crop yield.	Determine the most suitable and profitable crop to plant in my field for the upcoming season.	Weather patterns are unpredictable, and analyzing complex soil chemistry variables manually is difficult..	Weather patterns are unpredictable, and analyzing complex soil chemistry variables manually is difficult.	Anxious about potential financial loss and uncertain about the future harvest.
